

FULLERENES

Every KYRA™ product uses the applied "Nobel" science of Fullerenes to deliver payloads of important nutrients to the skin!

Fullerenes are up to 10 million times smaller than liposomes or nansomes, and therefore carry and deliver exponential payloads of nutrients to the skin.

Where does that leave the competition?

Fullerenes are now **the most precious and rare elemental carbon on earth**, having surpassed the rarity of both diamonds and graphite! Plus . . . we could say that our **Kyra™** products are "right out of this world - as **Fullerenes are extra-terrestrial in origin!** They are in fact, the remains of fallen meteors, and are mined in the shungite pits of the northern Urals.

Ironically, Fullerenes are the only pure form of molecular carbon that the human body can utilize! A healthy carbon network means oxygen that won't stray to become free radicals - the major cause of both cancer and aging. These Fullerene carbon spheres have also proven themselves as highly effective wound healers.

Fullerenes, are named for the acclaimed philosopher and designer of the geodesic dome, **Buckminster Fuller**. They are in fact, often referred to as "Bucky Balls" or buckminsterfullerenes. This is due to their multi-faceted "geodesic sphere" or cage-like structure - similar to the appearance of a soccer ball.
