

SPIN TRAP

PBN – The best known Spin Trap, is also the world's only "intelligent" antioxidant! It picks up free radicals and delivers them back to their intended function...TISSUE RESPIRATION!

Some Facts about Spin Trap Antioxidants

KYRA™ formulations use the power of **Spin Trap** - the world's only "**intelligent antioxidant**" - to capture the wayward oxygen molecules that come into contact with the skin. These "rogue molecules" are one of the primary causes for many forms of skin cancer, as well as premature aging. Once captured, the intelligence inherent to Spin Trap plugs them back into their intended goal of tissue respiration. In other words, **Spin Trap** deals with free radicals constructively - rather than destructively.

Free radicals are normal oxygen-bearing units that wander off their intended paths of usefulness. Typically, antioxidants deal destructively with free radicals because they chemically react with free radicals to convert the rogue oxygen (reactive oxygen species) into water, which the body already has plenty of. They contain vital oxygen for the deepest tissue, which is also the most vulnerable to low oxygen conditions, such as hypoxia. Antioxidants can contribute to hypoxia, by indiscriminately converting oxygen to water. While oxygen is breathable everywhere in the human body, water is not.

Unlike a typical antioxidant, **Spin Trap** (A.K.A. Phenyl Butyl Nitron, PBN) deals **constructively** with free radicals, therefore the more of this "intelligent" antioxidant you have, the better!
